HOT BODIES E-ZILLA 10 ROLL CAGE KIT

The RCS E-Zilla cage is a simple, unique design that adds great strength and protection. It installs easily and stock bodies fit with no alterations. Read these instructions and review the photos before you start. You will need a Phillips screwdriver, a 2.5 mm allen wrench, and medium strength thread lock compound such as Loctite blue.

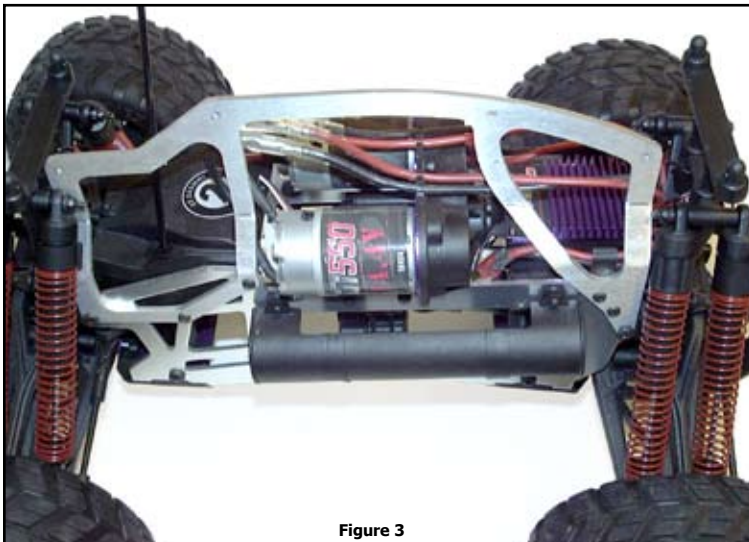

1. (1) LEFT CAGE RAIL
2. (2) RIGHT CAGE RAIL
3. (4) CAGE SPACERS
4. (8) M3x8 SHCS
(Socket Head Cap Screws)

1. Remove the body. Starting on the left side, remove six screws from the chassis plate as shown in *Figure 2*.

2. Attach the *Left Side Roll Cage* with the six original screws as shown in *Figure 3*. Push the motor wires in to prevent rubbing against the cage.

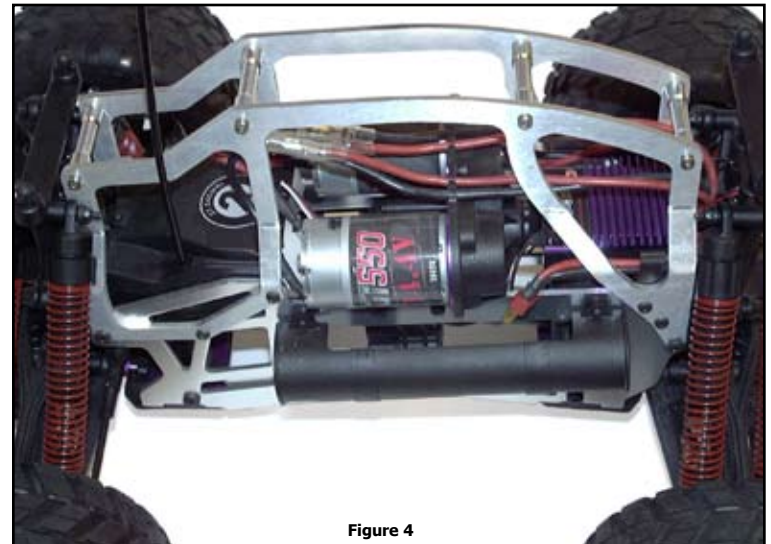

3. Attach the *Right Side Roll Cage* the same way. Install the *four spacers* with the *M3x8 SHCS* as shown in *Figure 4*. The use of medium thread lock compound on these screws is recommended but not necessary.

4. Fit the body to the truck. Stock bodies need no modifications at all. Other bodies may need modifications to clear the roll cage. Use a hobby knife, body scissors, or a rotary tool to make these mods as needed.

Now go play!

Check out www.rc-solutions.com for all our R/C products.

NOTES:

1. This roll cage adds strength and protection to your E-Zilla, but it is not indestructible. It will bend from some impacts, especially crashing on asphalt or concrete. Always drive the truck with a body on. Crashing with a body allows the truck to slide along the ground. Crashing without a body results in the cage digging in and "sticking" to the ground, which is much more likely to bend the cage.

2. All items returned to RC Solutions for credit will be charged a 10% restocking fee.
