## MINIZILLA ROLL CAGE KIT

Read these instructions and review the photos before you start. Use your factory owner's manual for reference. This roll cage mounts to stock vehicles. You will need a 2.5mm ball-tip allen driver, and a medium strength thread lock compound, such as Loctite Blue. Most truck bodies will need to be modified to fit around the cage. A razor knife or rotary cutting tool such as a Dremel, is needed for these modifications.

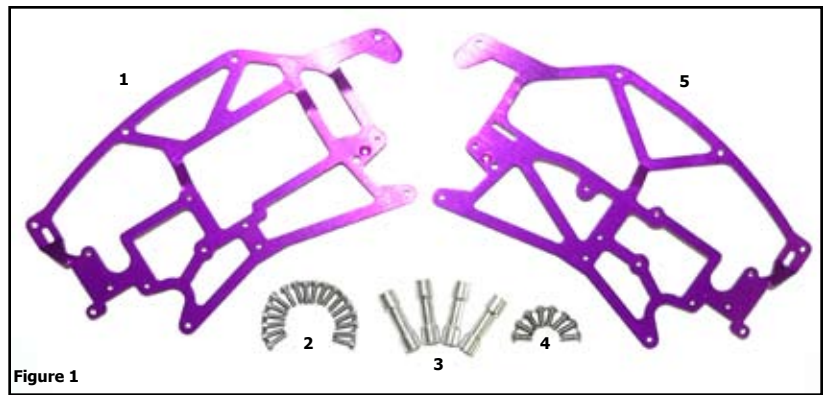

Figure 1

1. **RIGHT RAIL**
2. **(18) M2.5x8 SHCS**  
(Socket Head Cap Screws)
3. **(4) SPACERS**
4. **(8) M3x8 BHCS**  
(Button Head Cap Screw)
5. **LEFT RAIL**

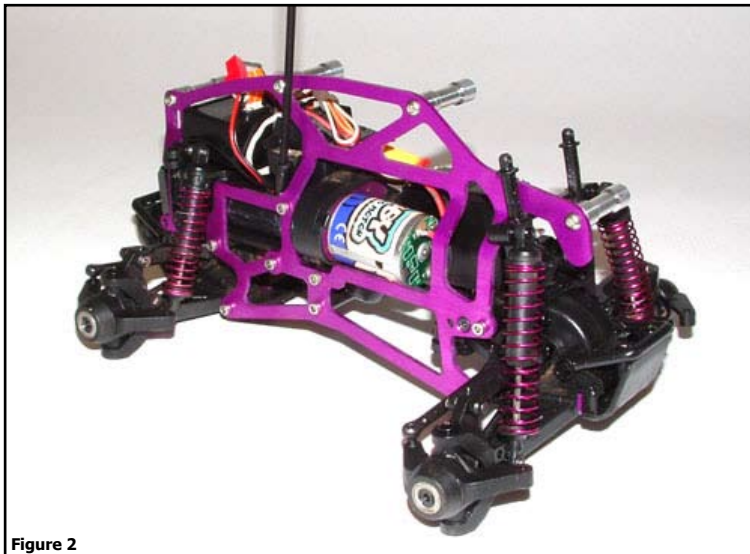

Figure 2

1. Remove the body, wheels, rear shocks, and rear body posts.
2. Install one side of the cage at a time. Remove the rear body post mounts from the stock TVPs and attach them to the new *TVP/cage sides*. Install the *Spacers* with *M3x8mm BHCS*. The sides are installed using the *M2.5x8mm SHCS*. Reuse the stock screws on the counter sunk holes only (3 each side). Make sure to protect all wiring on the truck from possible rubbing and shorting. Always use well-protected batteries to prevent possible shorts and damage.
3. Reinstall the rear body posts, wheels, shocks and body.
4. **Modifying the body.** For a pickup style body, cut a rectangular hole in the bed as shown in Figure 3. Make the cut about 1-1/2" wide, centered in the body width. Start at the roof and rear window intersection, cutting down the window and straight back till the cage clears. The back of the truck bed will rest on the cage near the body mounts.

This cage does not have its own body mount tabs; use the original body mount posts to hold the body on.

### Now go play!

### NOTES:

1. This roll cage adds strength and protection to your truck, but it is not indestructible. It will bend from some impacts, especially crashing on asphalt or concrete. Always drive the truck with a body on. Crashing with a body allows the truck to slide along the ground. Crashing without a body results in the cage digging in and "sticking" to the ground, which is much more likely to bend the cage.

2. All items returned to RC Solutions for credit will be charged a 10% restocking fee.
